## DC Blower Benefits & Applications

### DC Blower

With high static pressure, NMB centrifugal blowers are suitable for cooling electronic systems generating lots of heat and high impedance from back pressure. A DC blower contains a circular impeller within an enclosed cage, which is often referred to as a “squirrel cage”. This design allows DC Blowers to create directed airflow under high pressure conditions. A DC Blower has a more concentrated airflow in which the equipment pulls air in from the sides and forces it out at a concentrated 90° angle.

### Benefits

- High pressure and high airflow
- Long life and high reliability with NMB precision ball bearings
- Concentrated airflow to effectively cool target
- Smooth PQ curve with no knee
- Tacho Output for Speed Monitoring

### Applications

- Factory Automation
- Humidifiers
- Telecomm
- OA Equipment
- Network Servers
- Home Appliances
- Medical Devices
